

KFA Funds

Summary Prospectus

KFA Mount Lucas Index Strategy ETF

Principal Listing Exchange for the Fund: NYSE Arca, Inc.
Ticker Symbol: KMLM

August 1, 2022

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus, Statement of Additional Information, recent reports to shareholders and other information about the Fund online at www.kraneshares.com. You can also get this information at no cost by calling 1-855-857-2638, by sending an e-mail request to KraneFunds@seic.com or by asking any financial intermediary that offers shares of the Fund. The Fund's Prospectus and Statement of Additional Information, each dated August 1, 2022, as each may be amended or supplemented from time to time, are incorporated by reference into this Summary Prospectus and may be obtained, free of charge, at the website, phone number or email address noted above.

Investment Objective

The KFA Mount Lucas Index Strategy ETF (the “Fund”) seeks to provide investment results that, before fees and expenses, track the price performance of the KFA MLM Index (“Index”).

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy, hold, and sell shares of the Fund. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

| | |
|---|-------|
| Shareholder Fees (fees paid directly from your investment) | None |
| Annual Fund Operating Expenses | |
| (expenses that you pay each year as a percentage of the value of your investment) | |
| Management Fees | 0.89% |
| Distribution and/or Service (12b-1) Fees* | 0.00% |
| Acquired Fund Fees and Expenses | 0.03% |
| Other Expenses | 0.00% |
| Total Annual Fund Operating Expenses | 0.92% |

* Pursuant to a Distribution Plan, the Fund may bear a Rule 12b-1 fee not to exceed 0.25% per year of the Fund's average daily net assets. However, no such fee is currently paid by the Fund, and the Board of Trustees has not currently approved the commencement of any payments under the Distribution Plan.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, whether you do or do not sell your shares, your costs would be:

| 1 Year | 3 Years | 5 Years | 10 Years |
|--------|---------|---------|----------|
| \$94 | \$293 | \$509 | \$1,131 |

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the Example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 15% of the average value of its portfolio

Principal Investment Strategies

The Fund seeks to achieve its goal by investing in commodity, currency, and global fixed income futures contracts traded on U.S. and foreign exchanges that are the same as or similar to those included in the Index.

The Index is a modified version of the MLM Index, which is an index that measures the performance of a portfolio of commodity, currency, and global fixed income futures contracts traded on U.S. and foreign exchanges using a trend following methodology. The Index determines weightings of these three types of futures contracts by the relative historical volatility of each type of futures contract as determined by the MLM Index Committee. Within each type of futures contract, the underlying constituent markets are equal dollar weighted.

The Index will roll futures contracts forward on a market by market basis as each constituent market nears expiration. The selection of the constituent markets occurs annually. The constituent markets of the futures contracts for the Index currently consist of the following commodities (corn, crude oil, copper, gold, heating oil, cattle, natural gas, soybeans, sugar, wheat and gasoline), currencies (British pound, Canadian dollar, Australian dollar, Euro, Japanese Yen, and Swiss francs), and global bond markets (Canadian government bond, Euro bund, Japanese government bond, Long gilt and Ten-year Treasuries). Constituent markets are traded both long and short based on each market's trading signals.

The Index evaluates market trading signals on a daily basis and rebalances on the first day of the month. In addition, the Index has a target average annualized volatility of 15% over time.

The Fund will invest in futures contracts on commodities, currencies and global bond markets. The Fund will utilize a subsidiary (the "Subsidiary") for purposes of investing in futures contracts on commodities. The Subsidiary is a corporation operating under Cayman Islands law that is wholly-owned and controlled by the Fund. The Subsidiary is advised by the Fund's investment adviser, Krane Funds Advisors, LLC ("Krane" or "Adviser") and is sub-advised by Mount Lucas Index Advisers LLC, the Fund's sub-adviser ("MLIA" or "Sub-Adviser"). The Fund's investment in the Subsidiary may not exceed 25% of the value of its total assets (ignoring any subsequent market appreciation in the Subsidiary's value), which limitation is imposed by the Internal Revenue Code of 1986, as amended, and is measured at the end of the quarter. The Subsidiary has the same investment objective as the Fund and will follow the same investment policies and restrictions as the Fund. Except as noted, for purposes of this Prospectus, references to the Fund's investment strategies and risks include those of its Subsidiary, and references to the Fund include the Subsidiary. While the Fund will generally seek to maintain exposure to the same futures contracts as those included in the Index, the Fund and Subsidiary may not replicate the Index. For example, the Fund may invest in futures with different maturity dates, the Fund may weigh the futures differently than the Index, or the Fund may purchase futures on different dates than the rebalancing date for the Index. Fund assets not invested in futures contracts or the Subsidiary generally will be invested in debt instruments, exchange-traded funds ("ETFs"), cash or cash equivalent instruments, or money market mutual funds.

The Fund may also invest directly and indirectly in certain debt instruments. The debt instruments in which the Fund intends to invest include government securities and corporate or other non-government fixed-income securities with maturities of up to 12 months. The Fund may invest in debt instruments indirectly through short-term bond funds and ETFs. The Fund may also invest in cash and cash equivalents, including money market funds. Currently, the Fund expects to invest in ETFs to gain exposure to debt instruments.

While the Fund will generally seek to maintain exposure to the same futures contracts as those included in the Index, the Fund and Subsidiary may not replicate the Index. For example, the Fund may invest in futures with different maturity dates, the Fund may weight the futures differently than the Index, or the Fund may purchase futures on different dates than the rebalancing date for the Index.

The Commodities Futures Trading Commission (the “CFTC”) has adopted certain requirements that subject registered investment companies and their advisers to regulation by the CFTC if a registered investment company invests more than a prescribed level of its net assets in CFTC-regulated futures, options and swaps, or if a registered investment company markets itself as providing investment exposure to such instruments. Due to the Fund’s use of CFTC-regulated futures and swaps above CFTC Rule 4.5 limits, the Fund is considered a “commodity pool” under the Commodity Exchange Act.

The Fund is non-diversified. To the extent the Index is concentrated in a particular industry, the Fund is expected to be concentrated in that industry. As of May 31, 2022 the Index was invested in the futures contracts of the 11 commodities, 6 currencies, and 5 global bond markets listed above.

The Index is provided by Fuzzy Logix, Inc. (doing business as “FastINDX”) (“Index Provider”).

Principal Risks

As with all exchange traded funds (“ETFs”), a shareholder of the Fund is subject to the risk that his or her investment could lose money. The Fund may not achieve its investment objective and an investment in the Fund is not by itself a complete or balanced investment program. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. An investment in the Fund involves the risk of total loss. In addition to these risks, the Fund is subject to a number of additional principal risks that may affect the value of its shares, including:

Futures Strategy Risk. The use of futures contracts is subject to special risk considerations. The primary risks associated with the use of futures contracts include: (a) an imperfect correlation between the change in market value of the reference asset and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the inability to predict correctly the direction of market prices, interest rates, currency exchange rates and other economic factors; and (e) if the Fund has insufficient cash, it may have to sell securities or financial instruments from its portfolio to meet daily variation margin requirements, which may lead to the Fund selling securities or financial instruments at a loss.

As a futures contract the Fund owns approaches its settlement date, the Fund may sell that futures contract and reinvest the proceeds in a similar contract with a more distant settlement date. This process is referred to as “rolling” a futures contract. The successful use of such a strategy depends upon the Adviser’s or Sub-Adviser’s skill and experience. Although the Fund will attempt to roll from an expiring futures contract to another contract that the Adviser or Sub-Adviser believes will generate the greatest yield for the Fund, the Fund nevertheless may incur a cost to “roll” the contract. In a commodity futures market where current month expiring contracts trade at a lower price than next month’s contract, a situation referred to as “contango,” then, absent the impact of the overall movement in commodity prices, the Fund may experience an adverse impact because it would be selling less expensive contracts and buying more expensive contracts. In the event of a prolonged period of contango, and absent the impact of rising or falling commodity prices, there could be a significant negative impact on the Fund when it “rolls” its futures contract positions.

Commodity Risk. The Fund’s and the Subsidiary’s significant investment exposure to the commodities markets and/or a particular sector of the commodities markets may subject the Fund and the Subsidiary to greater volatility than investments in traditional securities. The commodities markets are impacted by a variety of factors, including market movements, resource availability, commodity

price volatility, speculation in the commodities markets, domestic and foreign political and economic events and policies, trade policies and tariffs, war, acts of terrorism, changes in domestic or foreign interest rates and/or investor expectations concerning interest rates, domestic and foreign inflation rates and investment and trading activities in commodities.

Prices of various commodities may also be affected by factors such as drought, floods, weather, livestock disease, embargoes, tariffs and other regulatory developments. The prices of commodities can also fluctuate widely due to supply and demand disruptions in major producing or consuming regions. To the extent the Fund focuses its investments in a particular commodity in the commodities market, the Fund will be more susceptible to risks associated with the particular commodity. No active trading market may exist for certain commodities investments. Because the Fund's and the Subsidiary's performance is linked to the performance of potentially volatile commodities, investors should be willing to assume the risks of significant fluctuations in the value of the Fund's shares.

Commodity-Linked Derivatives Risk. The value of a commodity-linked derivative investment typically is based upon the price movements of a physical commodity and may be affected by changes in overall market movements, volatility of an index, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, embargoes, tariffs and international economic, political and regulatory developments. Investments in commodity-linked derivatives may be subject to greater volatility than non-derivative based investments. Commodity-linked derivatives also may be subject to credit and interest rate risks that in general affect the values of debt securities.

Fixed Income Securities Risk. Fixed income securities are subject to credit risk and interest rate risk. Credit risk refers to the possibility that the issuer of a security will not make timely interest payments or repay the principal of the debt issued (i.e., default on its obligations). A downgrade or default on securities held by the Fund could adversely affect the Fund's performance. Generally, the longer the maturity and the lower the credit quality of a security, the more sensitive it is to credit risk. Interest rate risk refers to fluctuations in the value of a debt resulting from changes in the level of interest rates. When interest rates go up, the prices of most debt instruments generally go down; and when interest rates go down, the prices of most debt instruments generally go up. Debt instruments with longer durations tend to be more sensitive to interest rate changes, typically making them more volatile. Interest rates have recently increased and may continue increasing, thereby heightening the risks associated with rising interest rates.

Currency Risk. To the extent that the Fund is exposed directly or indirectly to foreign currencies, including through its investments, or invests in securities or other instruments denominated in or indexed to foreign currencies, changes in currency exchange rates could adversely impact investment gains or add to investment losses. Currency exchange rates may fluctuate significantly over short periods of time and can be affected unpredictably by intervention, or failure to intervene, by U.S. or foreign governments or central banks or by currency controls or political developments in the U.S. or abroad.

Commodity Pool Registration Risk. Under amended regulations promulgated by the CFTC, the Fund and the Subsidiary will be considered commodity pools upon commencement of operations, and therefore each will be subject to regulation under the Commodity Exchange Act and CFTC rules. Krane and MLIA will register as a commodity pool operator and commodity trading adviser, respectively, and will manage the Fund and the Subsidiary in accordance with CFTC rules, as well as the rules that apply to registered investment companies. Commodity pools are subject to additional laws, regulations and enforcement policies, all of which may potentially increase compliance costs and

may affect the operations and financial performance of the Fund and the Subsidiary. Additionally, positions in futures and other contracts may have to be liquidated at disadvantageous times or prices to prevent the Fund from exceeding any applicable position limits established by the CFTC. Such actions may subject the Fund to substantial losses.

Regulatory Risk. The Fund is subject to the risk that a change in U.S. law and related regulations will impact the way the Fund operates, increase the particular costs of the Fund's operations and/or change the competitive landscape. Additional legislative or regulatory changes could occur that may materially and adversely affect the Fund.

Subsidiary Investment Risk. By investing in the Subsidiary, the Fund is indirectly exposed to the risks associated with the Subsidiary's investments. Since the Subsidiary is organized under the law of the Cayman Islands and is not registered with the SEC under the Investment Company Act of 1940, as amended (the "1940 Act"), the Fund will not receive all of the protections offered to shareholders of registered investment companies. Changes in the laws of the United States and/or the Cayman Islands could result in the inability of the Fund and/or the Subsidiary to operate as intended, which may negatively affect the Fund and its shareholders.

Derivatives Risk. The use of derivatives (including swaps, futures, forwards, structured notes and options) may involve leverage, which includes risks that are different from, and greater than, the risks associated with investing directly in a reference asset, because a small investment in a derivative can result in a large impact on the Fund and may cause the Fund to be more volatile. Derivatives may at times be highly illiquid, and the Fund may not be able to close out or sell a derivative at a particular time or at an anticipated price. Derivatives can be difficult to value and valuation may be more difficult in times of market turmoil. There may be imperfect correlation between the derivative and that of the reference asset, resulting in unexpected returns that could materially adversely affect the Fund. Certain derivatives (such as swaps and options) are bi-lateral agreements that expose the Fund to counterparty risk, which is the risk of loss in the event that the counterparty to an agreement fails to make required payments or otherwise comply with the terms of derivative. In that case, the Fund may suffer losses potentially equal to, or greater than, the full value of the derivative if the counterparty fails to perform its obligations. That risk is generally thought to be greater with over-the-counter (OTC) derivatives than with derivatives that are exchange traded or centrally cleared. Counterparty risks are compounded by the fact that there are only a limited number of ways available to invest in certain reference assets and, therefore, there may be few counterparties to swaps or options based on those reference assets. Many derivatives are subject to segregation requirements that require the Fund to segregate the market or notional value of the derivatives, which could impede the portfolio management of the Fund.

Geographic Focus Risk. The Fund's investments will be focused in a particular country, countries, or region and therefore the Fund may be susceptible to adverse market, political, regulatory, and geographic events affecting that country, countries or region. Such geographic focus also may subject the Fund to a higher degree of volatility than a more geographically diversified fund.

European Union Risk. The economies of the European Union are dependent to a significant extent on those of certain key trading partners, including China, the United States, and other European countries. A reduction in spending on products and services exported from the European Union, or volatility in the financial markets of member countries, may have an adverse impact on the broader European Union economy and could adversely affect the Fund. Separately, the European Union

faces issues involving its membership, structure, procedures and policies. The United Kingdom (UK) officially withdrew from the European Union on January 31, 2020. Upon the UK's withdrawal from the European Union, the European Union and the UK entered into a transition phase, which concluded on December 31, 2020, and the UK and the European Union agreed upon a Trade and Cooperation Agreement that became fully effective on May 1, 2021. The UK, European Union and broader global economy may still experience volatility in foreign exchange markets as a result of these events. The UK's withdrawal may also destabilize some or all of the other European Union member countries and/or the Eurozone. The exit of additional member states from the European Union would subject its currency and banking system to increased risk and would likely result in increased volatility, illiquidity and potentially lower economic growth in the affected markets. Additionally, the reintroduction of national currencies in one or more European Union countries or the abandonment of the Euro as a currency could adversely affect the Fund.

Foreign Investments Risk. Investments in non-U.S. instruments may be less liquid than U.S. investments, may have less governmental regulation and oversight, and are typically subject to different investor protection standards. Investments in non-U.S. instruments may involve risk of loss due to foreign currency fluctuations and political or economic instability. Foreign market trading hours, clearance and settlement procedures, and holiday schedules may limit the Fund's ability to buy and sell investments. These factors could result in a loss to the Fund.

Concentration Risk. The Fund's assets are expected to be concentrated in an industry or group of industries to the extent that the Index concentrates in a particular industry or group of industries. The securities of companies in an industry or group of industries could react similarly to market developments. Thus, the Fund is subject to loss due to adverse occurrences that may affect that industry or group of industries or sector.

Short Sale Risk. Short sales, at least theoretically, present a risk of unlimited loss on an individual security basis, since the Fund may be required to buy the security sold short at a time when the security has appreciated in value, and there is potentially no limit to the amount of such appreciation. Because the Fund may invest the proceeds of a short sale, another effect of short selling on the Fund is leverage, in that it amplifies changes in the Fund's net asset value since it increases the exposure of the Fund to the market. The Fund may not always be able to close out a short position at a favorable time or price. If the Fund covers its short sale at an unfavorable price, the cover transaction is likely to reduce or eliminate any gain, or cause a loss to the Fund. When the Fund is selling a security short, it must maintain a segregated account of cash or high-grade securities equal to the margin requirement. As a result, the Fund may maintain high levels of cash or other liquid assets (such as U.S. Treasury bills, money market instruments, certificates of deposit, high quality commercial paper and long equity positions). The Fund may utilize the collateral obtained from securities lending for this cash. The need to maintain cash or other liquid assets in segregated accounts could limit the Fund's ability to pursue other opportunities as they arise.

Non-Diversified Fund Risk. The Fund is non-diversified and may concentrate its investments to a greater extent than a diversified fund. Changes in the market value of a single portfolio holding could cause greater fluctuations in the Fund's share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a single portfolio holding or a relatively small number of portfolio holdings to have a greater impact on the Fund's performance.

ETF Risk. As an ETF, the Fund is subject to the following risks:

Authorized Participants Concentration Risk. The Fund has a limited number of financial institutions that may act as Authorized Participants. To the extent they exit the business or are otherwise unable to proceed in creation and redemption transactions with the Fund and no other Authorized Participant is able to step forward to create or redeem, shares of the Fund may be more likely to trade at a premium or discount to NAV and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for exchange-traded funds (“ETFs”), such as the Fund, that invest in securities issued by non-U.S. issuers or other securities or instruments that have lower trading volumes.

Cash Transactions Risk. Like other ETFs, the Fund sells and redeems its shares only in large blocks called Creation Units and only to “Authorized Participants.” Unlike many other ETFs, however, the Fund expects to effect its creations and redemptions at least partially or fully for cash, rather than in-kind securities. Thus, an investment in the Fund may be less tax-efficient than an investment in other ETFs as the Fund may recognize a capital gain that it could have avoided by making redemptions in-kind. As a result, the Fund may pay out higher capital gains distributions than ETFs that redeem in-kind. Further, paying redemption proceeds in cash rather than through in-kind delivery of portfolio securities may require the Fund to dispose of or sell portfolio investments to obtain the cash needed to distribute redemption proceeds at an inopportune time.

International Closed Market Trading Risk. To the extent the Fund’s investments trade in markets that are closed when the Fund and Exchange are open, there are likely to be deviations between current pricing of an underlying security and the prices at which the underlying securities are valued for purposes of the Fund’s NAV. As a result, Shares may appear to trade at a significant discount or premium to NAV greater than those incurred by other ETFs. In addition, shareholders may not be able to purchase or redeem their shares of the Fund, or purchase or sell shares of the Fund on the Exchange, on days when the NAV of the Fund could be significantly affected by events in the relevant non-U.S. markets.

Premium/Discount Risk. There may be times when the market price of the Fund’s shares is more than the NAV intra-day (at a premium) or less than the NAV intra-day (at a discount). As a result, shareholders of the Fund may pay more than NAV when purchasing shares and receive less than NAV when selling Fund shares. This risk is heightened in times of market volatility or periods of steep market declines. In such market conditions, market or stop loss orders to sell Fund shares may be executed at prices well below NAV.

Secondary Market Trading Risk. Investors buying or selling shares in the secondary market will normally pay brokerage commissions, which are often a fixed amount and may be a significant proportional cost for investors buying or selling relatively small amounts of shares. Secondary market trading is subject to bid-ask spreads and trading in Fund shares may be halted by the Exchange because of market conditions or other reasons. If a trading halt occurs, a shareholder may temporarily be unable to purchase or sell shares of the Fund. In addition, although the Fund’s shares are listed on the Exchange, there can be no assurance that an active trading market for shares will develop or be maintained or that the Fund’s shares will continue to be listed.

Liquidity Risk. The Fund's investments are subject to liquidity risk, which exists when an investment is or becomes difficult or impossible to purchase or sell at an advantageous time and price. If a transaction is particularly large or if the relevant market is or becomes illiquid, it may not be possible to initiate a transaction or liquidate a position, which may cause the Fund to suffer significant losses and difficulties in meeting redemptions. Liquidity risk may be the result of, among other things, market turmoil, the reduced number and capacity of traditional market participants, or the lack of an active trading market. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, new legislation or regulatory changes inside or outside the U.S. Liquid investments may become less liquid after being purchased by the Fund, particularly during periods of market stress. In addition, if a number of securities held by the Fund stop trading, it may have a cascading effect and cause the Fund to halt trading. Volatility in market prices will increase the risk of the Fund being subject to a trading halt. Certain countries in which the Fund may invest may be subject to extended settlement delays and/or foreign holidays, during which the Fund will unlikely be able to convert holdings to cash.

Tracking Error Risk. The Fund's return may not match or achieve a high degree of correlation with the return of the Index. This may be due to, among other factors, the Fund's investments in debt instruments, ETFs, cash or cash equivalent instruments, or money market mutual funds. To the extent that the Fund invests in other instruments that are consistent with its investment objective, such as, the Fund's ability to track the Index may be adversely affected.

Passive Investment Risk. There is no guarantee that the Index will create the desired exposure and the Fund is not actively managed. It does not seek to "beat" the Index or take temporary defensive positions when markets decline. Therefore, the Fund may purchase or hold securities with current or projected underperformance.

Management Risk. Because the Fund may not fully replicate the Index and may hold less than the total number of investments in the Index, the Fund is subject to management risk. This is the risk that the sub-adviser's investment selection process may not produce the intended results.

Market Risk. The values of the Fund's holdings could decline generally or could underperform other investments. In addition, there is a risk that policy changes by the U.S. Government, Federal Reserve, and/or other government actors could cause volatility in global financial markets and negative sentiment, which could have a negative impact on the Fund and could result in losses. Geopolitical and other risks, including environmental and public health risks may add to instability in world economies and markets generally. Changes in value may be temporary or may last for extended periods. Further, the Fund is susceptible to the risk that certain investments may be difficult or impossible to sell at a favorable time or price. Market developments may also cause the Fund's investments to become less liquid and subject to erratic price movements.

High Portfolio Turnover Risk. The Fund may incur high turnover rates, which may increase the Fund's brokerage commission costs and negatively impact the Fund's performance. Such portfolio turnover also may generate net short-term capital gains.

Valuation Risk. Independent market quotations for certain investments held by the Fund may not be readily available, and such investments may be fair valued or valued by a pricing service at an evaluated price. These valuations involve subjectivity and different market participants may assign different prices to the same investment. As a result, there is a risk that the Fund may not be able to

sell an investment at the price assigned to the investment by the Fund. In addition, the securities in which the Fund invests may trade on days that the Fund does not price its shares; as a result, the value of Fund shares may change on days when investors cannot purchase or sell their Fund holdings.

Tax Risk. In order to qualify for the favorable tax treatment generally available to regulated investment companies, the Fund must satisfy certain income, asset diversification and distribution requirements each year. If the Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income, which would adversely affect the Fund's performance.

The Fund intends to treat its income from the Subsidiary as qualifying income. The tax treatment of the Fund's investment in the Subsidiary may be adversely affected by future legislation, court decisions, Treasury Regulations and/or guidance issued by the IRS that could affect whether income derived from such investments is "qualifying income" under Subchapter M of the Internal Revenue Code, or otherwise affect the character, timing and/or amount of the Fund's taxable income or any gains or distributions made by the Fund.

U.S. Government Obligations Risk. Obligations of U.S. Government agencies and authorities receive varying levels of support and may not be backed by the full faith and credit of the U.S. Government, which could affect the Fund's ability to recover should they default. No assurance can be given that the U.S. Government will provide financial support to its agencies and authorities if it is not obligated by law to do so. Additionally, market prices and yields of securities supported by the full faith and credit of the U.S. government may decline or be negative for short or long periods of time.

Investments in Investment Companies Risk. The Fund may invest in other investment companies, including those advised, sponsored or otherwise serviced by Krane or MLIA. The Fund will indirectly be exposed to the risks of investments by such funds and will incur its pro rata share of the underlying fund's expenses. Krane and MLIA are subject to conflicts of interest in allocating Fund assets to investment companies that are advised, sponsored or otherwise serviced by Krane, MLIA and/or each of their affiliates. To the extent that the Fund invests in investment companies or other pooled investment vehicles that are not registered pursuant to the 1940 Act, including foreign investment companies, it will not enjoy the protections of the U.S. law.

Cash and Cash Equivalents Risk. The Fund may hold cash or cash equivalents. Generally, such positions offer less potential for gain than other investments. Holding cash or cash equivalents, even strategically, may lead to missed investment opportunities. This is particularly true when the market for other investments in which the Fund may invest is rapidly rising. If the Fund holds cash uninvested it will be subject to the credit risk of the depositing institution holding the cash.

Performance Information

The following bar chart and table illustrate the variability of the Fund's returns and indicate the risks of investing in the Fund by showing how the Fund's average annual total returns compare with those of a broad measure of market performance. All returns include the reinvestment of dividends and distributions. As always, please note that the Fund's past performance (before and after taxes) is not necessarily an indication of how it will perform in the future. Prior to April 1, 2022, the Fund was actively managed and sought to outperform the Index through investments in debt instruments. Updated performance information is available at no cost by visiting www.kfafunds.com.

As of June 30, 2022, the Fund's calendar year-to-date total return was 31.71%.

Best and Worst Quarter Returns (for the period reflected in the bar chart above)

| | Return | Quarter Ended/Year |
|--------------------------|--------|--------------------|
| Highest Return | 5.52% | 6/30/2021 |
| Lowest Return. | -4.76% | 12/31/2021 |

Average Annual Total Returns for the periods ended December 31, 2021

| | 1 year | Since Inception (12-1-2020) |
|---|--------|-----------------------------|
| KFA Mount Lucas Index Strategy ETF | | |
| Return Before Taxes | 7.34% | 12.16% |
| Return After Taxes on Distributions. | 4.57% | 9.48% |
| Return After Taxes on Distributions and Sale of Fund Shares. | 4.40% | 8.19% |
| KFA MLM Index (Reflects no deduction for fees, expenses or taxes) | 9.00% | 13.75% |

Management

Investment Adviser and Sub-Adviser

Krane Funds Advisors, LLC (“Krane” or “Adviser”) serves as the investment adviser to the Fund. Mount Lucas Index Advisers LLC (“MLIA” or “Sub-Adviser”) serves as the investment sub-adviser to the Fund.

Portfolio Managers

Timothy J. Rudderow Sr., Chief Executive Officer and Chief Investment Officer of MLIA; Gerald L. Prior, III, Chief Operating Officer and Senior Portfolio Manager of MLIA; and David Aspell, Portfolio Manager of MLIA are the Fund’s Portfolio Managers and are jointly and primarily responsible for the day to day management of the Fund’s portfolio. Messrs. Rudderow, Prior, and Aspell have served as portfolio manager of the Fund since its inception.

Purchase and Sale of Fund Shares

Shares may be purchased and redeemed from the Fund only in “Creation Units” of 50,000 shares, or multiples thereof. As a practical matter, only institutions and large investors, such as market makers or other large broker-dealers, purchase or redeem Creation Units. Most investors will buy and sell shares of the Fund on the Exchange. Individual shares can be bought and sold throughout the trading day like other publicly traded securities through a broker-dealer on the Exchange. These transactions do not involve the Fund. The price of an individual Fund share is based on market prices, which may be different from its NAV. As a result, the Fund’s shares may trade at a price greater than the NAV (at a premium) or less than the NAV (at a discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the “bid-ask spread”). Most investors will incur customary brokerage commissions and charges when buying or selling shares of the Fund through a broker-dealer.

Recent information regarding the Fund, including its NAV, market price, premiums and discounts, and bid ask spreads, are available on the Fund’s website at www.kfafunds.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged retirement account, which may be taxable upon withdrawal.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase Fund shares through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your sales person to recommend the Fund over another investment. Ask your sales person or visit your financial intermediary’s website for more information.
